

General features of clavicle & scapula

Clavicle

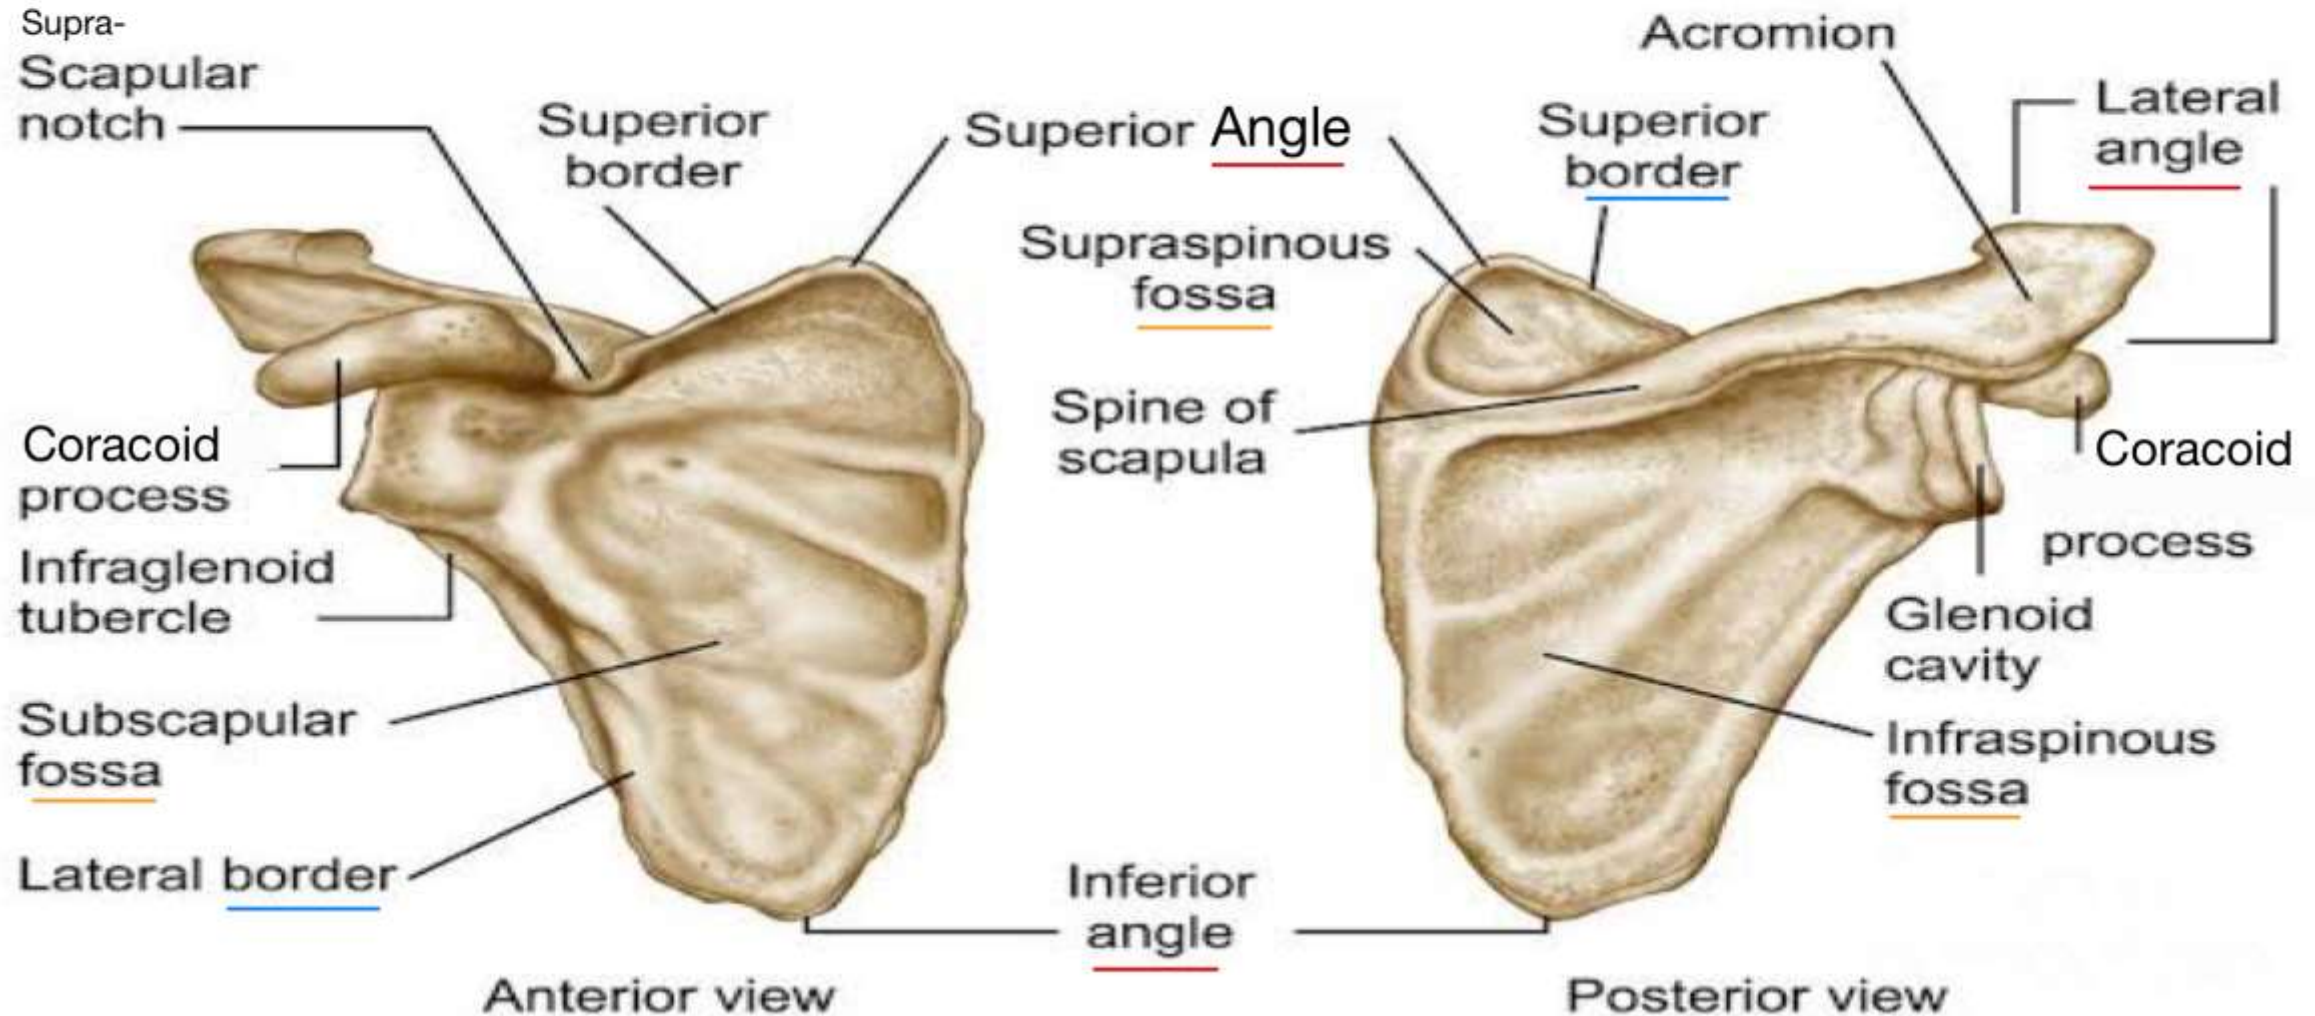

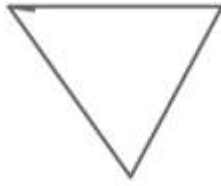

How To IDENTIFY THE CLAVICLE RIGHT OR LEFT?

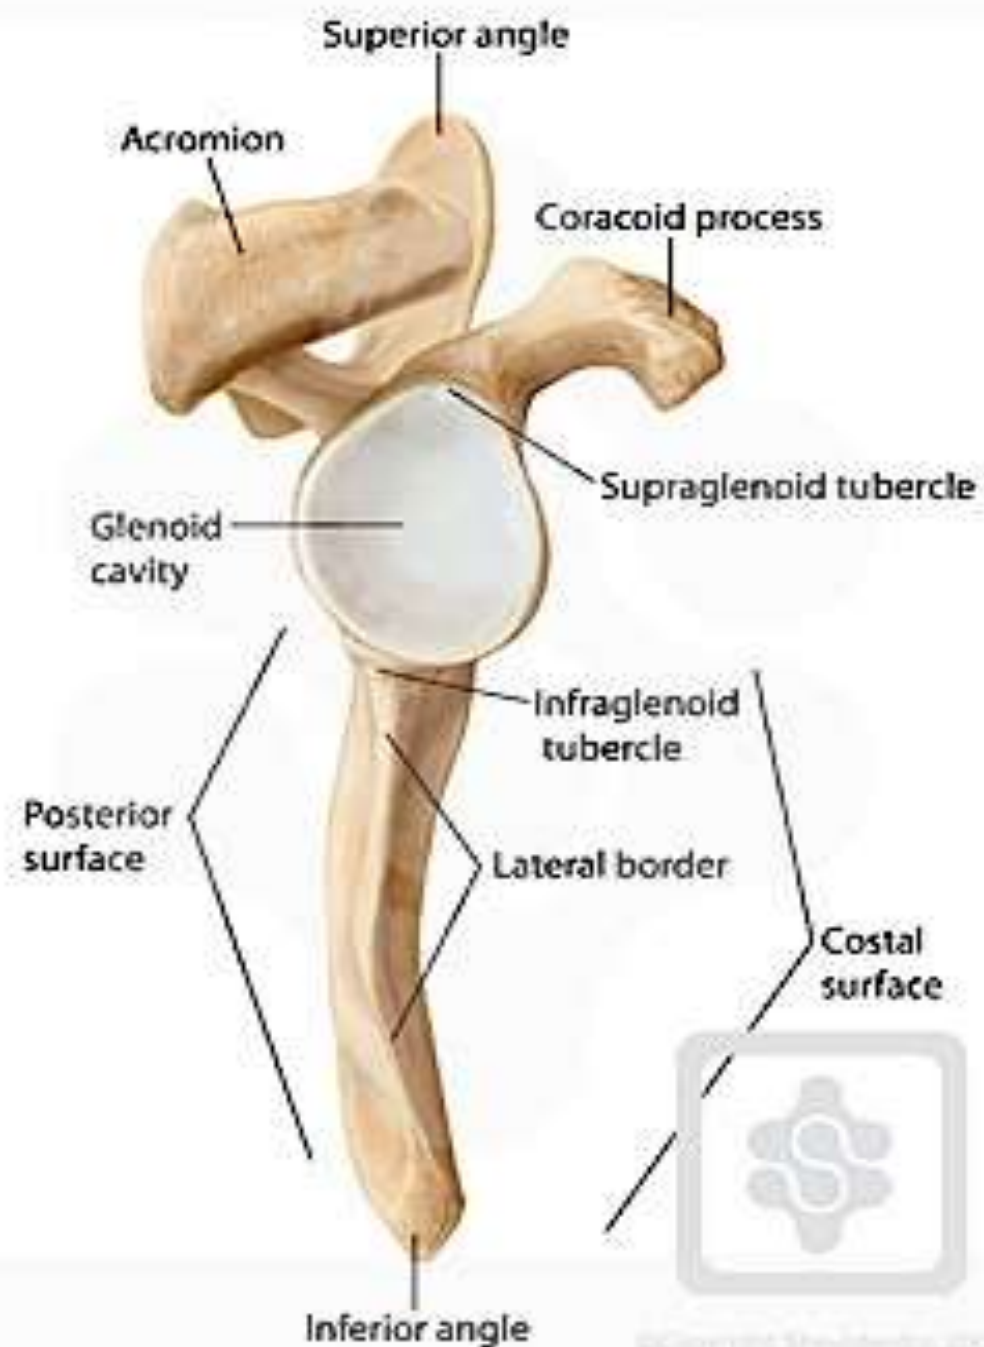

- Put the bone in the anatomical position with reference to your body.
- The medial end is rounded and thick, while the lateral end is flat.
- The anterior surface is convex in its medial $\frac{2}{3}$, but concave in its lateral $\frac{1}{3}$.
- The superior surface is smooth, while the inferior surface is rough.

The Scapula

2 Surfaces
3 Borders
3 Angles

RIGHT LATERAL VIEW

How TO IDENTIFY THE SCAPULA RIGHT OR LEFT?

- The dorsal surface has the spine, the supraspinous fossa and the infraspinous fossa.
- The lateral angle bears the glenoid cavity (head of scapula).
- The upper border has the suprascapular notch.
